In the Claims

1. (Original) A method of creating a liquid developer with improved conductivity comprising:

dissolving a solid charge adjuvant in a carrier liquid aided by heating the carrier liquid;

then mixing the dissolved charge adjuvant with a thermoplastic resin and carrier liquid;

grinding the mixture to form toner particles; and adding a charge director to charge the toner particles.

2. (Original) A method according to claim 1 wherein mixing and grinding comprises:

mixing the thermoplastic resin with carrier liquid;

heating the mixture of carrier liquid and thermoplastic resin to plasticize the resin; cooling the plasticized resin;

adding the dissolved charged adjuvant to the cooled plasticized resin;

grinding the mixture of charge adjuvant and plasticized resin to form toner particles.

3. (Original) A method according to claim 1 wherein mixing and grinding comprises:

mixing the thermoplastic resin with carrier liquid and dissolved charged adjuvant at an elevated temperature;

cooling the mixture;

grinding the cooled mixture to form toner particles.

- 4. (Currently Amended) A method according to any of the preceding claims claim 1, comprising adding a colorant.
 - 5. (Canceled)
- 6. (Currently Amended) A method according to any of the preceding claims claim 1, wherein said charge adjuvant is a metallic soap.
- 7. (Original) A method according to claim 6 wherein the metallic soap is an aluminum soap.
- 8. (Original) A method according to claim 6, wherein said metallic soap comprises an aluminum stearate
- 9. (Original) A method according to claim 7 wherein the aluminum stearate comprises aluminum tri-stearate.
- 10. (Currently Amended) A method according to any of the preceding claims claim 1, wherein said dissolving is aided by heating to a temperature exceeding 120°C.
- 11. (Original) A method according to claim 1, wherein said dissolving is aided by heating to a temperature exceeding 130°C.

LEE & HAYES, PLLC

12. (Currently Amended) A method according to any of claims 1-10 claim 1, wherein said dissolving is aided by heating to a temperature of no greater than 130°C.

- 13. (Currently Amended) A method according to any of the preceding claims claim 1 wherein and including cooling the dissolved charge adjuvant to a temperature below 60°C, prior to mixing it with the polymer.
- 14. (Currently Amended) A method according to any of the preceding claims claim 1 wherein the charge adjuvant has only limited solubility in the carrier liquid at 25°C.
- 15. (Currently Amended) A method according to any of the preceding claims claim 1 wherein the charge adjuvant is substantially insoluble in the carrier liquid at 25°C.
- 16. (Currently Amended) A method according to any of the preceding claims claim 1 wherein the charge adjuvant does not dissolve in the carrier liquid at a temperature at which it is mixed with the polymer, but remains dissolved therein, when dissolved therein at said mixing temperature, when dissolved at a higher temperature.
- 17. (Currently Amended) A method according to any of the preceding claims claim 1 wherein the charge adjuvant does not substantially dissolve in the carrier liquid at 40°, but remains dissolved therein, when dissolved at a higher temperature.

18. (Currently Amended) A method according to any of the preceding claims claim 1 wherein the charge adjuvant does not substantially dissolve in the carrier liquid at 60°, but remains dissolved therein, when dissolved at a higher temperature.

19. (Currently Amended) A method according to any of the preceding claims claim 1 wherein dissolving includes adding a surfactant to the solution of carrier liquid and charge adjuvant.

- 20. (Cancelled)
- 21. (Currently Amended) A method according to claim 20 1 wherein said mixing and grinding are performed in a same grinder or an a same attritor.
- 22. (Currently Amended) A method according to any of claims 1-19 claim 1 wherein said mixing is performed in a first vessel and wherein said grinding is performed in a second vessel.
- 23. (Original) A method according to claim 22 wherein said mixing is performed in a mixer without grinding media.
- 24. (Currently Amended) A method according to claim 21 or claim 22 wherein said grinding is performed in a grinder or an attritor.

25. (NEW) A method according to claim 2, wherein said dissolving is aided by heating to a temperature exceeding 120°C.

- 26. (NEW) A method according to claim 2, wherein said dissolving is aided by heating to a temperature exceeding 120°C.
- 27. (NEW) A method according to claim 10 wherein and including cooling the dissolved charge adjuvant to a temperature below 60°C, prior to mixing it with the polymer.
